

FDM215

The FDM215 is a mixed-service drive axle tyre designed for high mileage, strong durability, and excellent off-road traction. Its rugged centreline rib improves mud drainage and stone rejection, maintaining consistent grip even in harsh and abrasive conditions.

A cool-running, abrasion-resistant tread compound and reinforced base reduce wear, while wide open shoulder grooves support self-cleaning. Quick release grooves minimise stone drilling, and a protective top belt enhances casing life. With strong damage resistance and reliable retreadability, the FDM215 is a tough, dependable choice for mixed-service work.

Performance Ratings:

Mileage Potential

Off-Road Traction

Damage Resistance

Features:

The FDM215 delivers the benefits of high traction throughout the complete tyre life in all carriageway conditions, plus even wear in abrasive road condition and on/off-road mixed surfaces.

Mixed Road Series

1
Cool running, highly abrasion cut resistant tread compound. Optimized rib width for even wear.

Increased undertread gauge, tear- and cut resistant base compound. The chemical formulation and polymer network provide excellent treadwear performance.

High mileage and casing durability; reduced tread wear in mixed services. Even tread wear over the complete wide tread throughout the life of the tyre.

2
High centre-line net contact area with tie bars. Rugged centreline rib.

The rugged centreline rib offers high damage resistance & reduces centreline wear.

Even wear in abrasive road conditions, high mileage potential and casing durability.

3
Wide, open shoulder grooves with stone penetration protectors.

Excellent mud drainage and stone rejection, retains high traction level even when worn.

High traction throughout complete tyre life and within all carriageway conditions.

4
"Quick Release" groove-shape minimises stone-drilling.

Top belt for infinite casing protection against corrosion.

New level of casing durability and retreadability performance.
